## **World's first: SOLARWATT GmbH is now delivering glass-glass modules with an output of 300 watt peak**

- SOLARWATT establishes a new output record with 300 Wp glass-glass module
- 30-year product and performance warranty

### **Dresden XX February 2016**

World's first from Dresden: SOLARWATT GmbH is now also offering the SOLARWATT 60M high power module with an output of 300 watt peak (Wp). The German solar pioneer is now the first company to produce a glass-glass model in this variant and with this output. SOLARWATT glass-glass modules are extremely durable and especially resistant to environmental influences – they are essentially "unbreakable". After 5,000 hours of damp heat tests (DHT) under intensified conditions, the 60 monocrystalline solar cells lost less than one percent of their output. "There are already modules in the market with 300 Wp output, but not as long-lasting glass-glass modules; private home owners and commercial operators can now generate their own solar power even more efficiently," explained SOLARWATT Managing Director Detlef Neuhaus.

SOLARWATT has been producing glass-glass solar modules since 1998 and changed its entire product portfolio to state-of-the-art glass-glass modules in 2013. The modules are manufactured in state-of-the-art production facilities in Dresden and have a 30-year product and performance warranty, which is unique for the sector. "As a provider of solar systems, the continuous development of high-performance, safe solar modules has always been very important to us. After all, the end customer can only profit from the output of the overall solar system if the entire system operates reliably and efficiently – and thus reduces costs over the long term," explained Carsten Bovenschen, Head of Finance at SOLARWATT GmbH. The Dresden-based company's new 300 Wp high-performance modules are now available.

### **About SOLARWATT:**

Founded in 1993, SOLARWATT GmbH is one of Germany's leading providers of photovoltaic solutions with over 200 employees. The Dresden-based company operates throughout Europe, providing solutions which range from high-quality, German-made solar modules to fully integrated, intelligent energy management and storage systems for domestic and commercial use. Since 2013 SOLARWATT GmbH is a cooperation partner of BMW i in the scope of the "360° Electric" program for low-emissions and efficient electric mobility and since 2015 develops high-quality and technologically innovative photovoltaic solutions with Bosch.
